

Inovata®

TISON ATTACK

DOUBLE ACTIVE SPOT-ON FOR SHEEP

For the treatment and control in crossbred sheep of susceptible gastrointestinal roundworms and lungworm, including strains with single resistance to either macrocyclic lactones or levamisole.

Product Features

- Simplifies the drenching process, reducing stress on stock and saving valuable time in the yards.
- Provides dependable control of major sheep parasites, including strains resistant to standard white drenches.
- Combines two proven actives — abamectin and levamisole — for broad-spectrum parasite control.
- A reliable and easy-to-use anthelmintic suitable for all classes of crossbred sheep.

TISON ATTACK

DOUBLE ACTIVE SPOT-ON FOR SHEEP

Tison Attack Spot-on contains two broad-spectrum anthelmintics from different drench families. Abamectin is a member of the macrocyclic lactone drench family and levamisole is an imidazothiazole. Tison Attack is effective against internal parasites sensitive to one or both of the anthelmintics in this drench.

Further Information:

Effective against the following gastrointestinal roundworms at both adult and immature stage

- *Haemonchus contortus**
- *Teladorsagia circumcincta**
- *Trichostrongylus axei*
- *Trichostrongylus vitrinus* *T. colubriformis*
- *Strongyloides papillosus*
- *Cooperia curticei**
- *Nematodirus filicollis* *N. spathiger*
- *Oesophagostomum venulosum*
- *Chabertia ovina*
- *Trichuris ovis*.

(*includes inhibited fourth stage larvae)

Also effective against:

- *Dictyocaulus filaria* (lungworm)

Active Ingredient

15 g/L Abamectin and 26 g/L Levamisole.

Withholding Periods:	Meat	35 Days
	Milk	35 Days
Dose Rate:	1mL/2.5kg	
Pack Size:	20L	

ACVM Act 1997, No. A012298
